

# El Paso County Economic & Workforce Progress Report (EPR)

## Highlights—October 2022

I always emphasize **Consumer Sentiment** (on your right) not only because the metric comes from University of Michigan (UM), but also because of the outsized influence confidence has on the broader economy. What we buy day in and day out keeps the economic engine going. Indeed, sentiment improved slightly in October and is now hovering around the 60 mark, off its lowest point this year of 50 in June (gas prices!). But I am also closely watching a component of consumer sentiment as is the Federal Reserve, and that is inflation expectations. In the short term (e.g., one year ahead), consumers are still dour about **Inflation {Page 3}** and that is much of the reason that overall sentiment is even lower now than during the Great Recession years. However, long term inflation expectations (five to ten years ahead) are lower, and that gives the Federal Reserve room to continue its path of **Interest Rate {Page 3}** hikes. It's fascinating that UM has decades of data showing that consumers' expectations on inflation are very close to what ends up happening. I believe that's because consumers are daily students of what prices they are paying and consciously or subconsciously, they figure out the trends. In the short term, consumers expect inflation to be at 5.1%, and in the longer term, they expect inflation levels at 2.9% - still above the 2.0% the Fed prefers, but much more manageable than current levels (8.2% in September). As many of you know, I often address in media pieces that there are structural (e.g., long-run) reasons that inflation may persist, and if that turns out to be true, there may be some stagflationary years ahead where we have persistent inflation alongside low economic growth.

Source: University of Michigan

What producers pay is, of course, a large determinant of the prices consumers end up paying. And, any business owner knows that labor costs are typically their largest cost component, which is much of the reason economists are closely watching labor market data. As the Fed tries to cool the economy to bring down inflation, we typically have upward pressure on the unemployment rate, but that still does not appear to be happening to any great extent. In fact, **Unemployment Rates {Page 3}** went down in September to 3.3% for the U.S. (from 3.8% in August), to 3.2% in Colorado (from 3.3%), and to 3.5% in El Paso County (from 3.7%). This means there will continue to be upward pressure on wages as there are two things that determine wages – labor demand, which is still high as evidenced by **Job Openings {Page 3}**, and labor participation (text box in same chart), which improved in August<sup>i</sup>, but is still four percentage points lower than 2006. It's important to note that labor participation overall is still about one percentage point lower than pre-pandemic, and that most of the reason for that continues to be the labor force exit of ages 55+ (chart to your right).

Source: U.S. Department of Labor and Wells Fargo Economics

Speaking of labor participation, one of the primary goals of the new nonprofit (DDES) is to provide detailed labor market data to the community. An exciting example of this is the new partnership we have with Widefield School District, which is using the top job openings, skills/certifications, and other data to hone their CTE, or career and technical educational programs. It's all about making training and education relevant to today's business needs. Widefield's efforts are a great extension of **The Mill**, which is a state-of-the-art training center for several trades where high schoolers can obtain skills and certifications required for the

highest-demand jobs. The chart on your right shows our region's top demanded jobs, the market salary (right axis), and the years required to qualify for those jobs. DDES digs deeper into the labor market data, but this chart gives you a broad-strokes look at some of the labor market information we are collecting and disseminating.

Shifting gears, there is a lot going on in the **Real Estate {Page 6}** market right now, but verbose Tatiana is going to cut off the economic speak now and refer you to the Fox21 economic updates I do because I am going to focus on our local housing market in this week's segment. Additionally, on page 6 of this report you can visually see the precipitous declines in residential building permits (down 73.1% in September 2022 compared to September 2021), and housing affordability (22.7% affordable in 2022 Q2, versus 71.4% affordable in 2019).

I'll end this with the same institution I mentioned at the beginning: The University of Michigan. Did you all see that my Wolverines beat Penn State, which was previously undefeated, with a final thrashing of 41-17? Big game this weekend against Michigan State, which I will mention in next month's highlights but only if my beloved Wolverines win.

Have a wonderful day and Halloween weekend!

Tatiana ([tbailey@ddestrategies.org](mailto:tbailey@ddestrategies.org)) & Rebecca ([rwilder@ddestrategies.org](mailto:rwilder@ddestrategies.org))

<sup>1</sup>August labor participation is the latest available data as this metric from the Bureau of Labor Statistics lags approximately two months.
